REMEMBER THE ISSUES BELOW THE SURFACE

eLearning is becoming a strategic investment for organizations today. With 15 years of experience in the LMS market, we find that many overlook what it takes for a successful launch. Taking significant time and resources, organizations will look to trusted partners like Lambda Solutions to outsource deployment activities.

What we have found is that IT departments are spread thin, meaning that your LMS may be pushed to the wayside. The iceberg graphic above depicts the hidden costs of deploying an LMS. The top three issues organizations experience when deploying an LMS are:

- 1 Reporting and Analytics**
Accessing, analyzing and presenting data for administrators, management and even users is not offered in many LMS's.
- 2 Cloud Hosting**
Ensuring that your LMS is always running and that your data is always safe is not an easy task. Trust the experts for a reliable, fast and user-friendly LMS.
- 3 System Integrations**
Connecting your LMS to other business critical systems is vital. A knowledgeable vendor will educate you on what integrations are possible and how seamlessly they integrate.

AN LMS EXPERT WILL ENSURE SUCCESSFUL ADOPTION.

TRUST A PARTNER TO ENSURE YOUR SUCCESS

Here are five questions to ask your Learning Management System vendor when evaluating a LMS:

- ▶ How can I quickly create and export insightful reports?
- ▶ Can I access all data in a Learning Management System?
- ▶ How flexible or open is your system to customize features or functionalities?
- ▶ How can the system integrate into our internal or external partner systems?
- ▶ How much IT involvement is needed to deploy your Learning Management System?
